INTERNSHIP COMPLETION CERTIFICATE

Software Development Intern (Summer 2026)

Ms. Shubhangi Bhagat
B.Tech (CSE - AI & ML), Manipal University Jaipur
Email: shubhangibhagat004@gmail.com | Mob: +91 83062 29406

Dear Shubhangi,

This is to certify that **Ms. Shubhangi Bhagat** successfully completed her Software Development Internship with **TruAdaptiv Systems Pvt Ltd** from **1 June 2026 to 31 July 2026**, under the Summer 2026 internship programme. Throughout this two-month, full-time online engagement she was assigned to a live, production project and consistently delivered work of a high professional standard.

1. Project & Scope of Work

Over the course of the internship, Shubhangi took end-to-end ownership of the analysis, design, and development of the **VRAS (Voice-based Audit System / Shruti-Sakshi) solution**, an AI-driven audio-analysis platform for operational compliance. She was responsible for the solution from initial requirement analysis through to production deployment.

She developed the solution using **Claude (Anthropic's AI) as the primary development assistant**, in line with the Company's tooling, while retaining full ownership of the correctness, quality, and architecture of the delivered system.

2. Key Contributions & Responsibilities

Her contributions over the internship period included, but were not limited to, the following:

- **End-to-end development** of the VRAS / Shruti-Sakshi backend, built on a Python 3.12, FastAPI, async SQLAlchemy, Celery/Redis, and PostgreSQL stack, covering the audio-processing pipeline, analysis engine, and reporting.
- **Design and implementation of the analysis modules**, including the operational gate-operations analyzer, speech-to-text correction layers, diarization-independent scoring, and automated PDF report generation.
- **Disciplined Git-based source-code management**, operating a strict pull-request-only workflow on the Company repository with structured branching, meaningful commits, code reviews, and release tagging.
- **Deployment to a production VPS (on-premise) server**, including service configuration, environment management, and a repeatable git-based redeploy process across application, worker, and scheduler services.
- **A separate AWS deployment instance driven by CloudFormation**, establishing infrastructure-as-code templates and a scripted deployment path for the cloud trial environment on AWS.
- **Multiple solution demonstrations to the end-customer**, presenting the working system directly to end-users, and capturing and acting on their feedback as part of User Acceptance Testing.

3. Conduct & Assessment

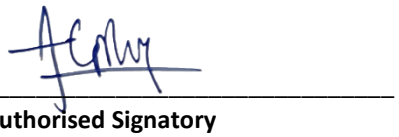

Throughout her internship, Shubhangi conducted herself professionally, met agreed timelines, and took genuine ownership of her deliverables. She demonstrated strong problem-solving ability, technical initiative, and a conscientious, quality-focused approach to production work. Her performance during the internship was **highly satisfactory**.

4. Confidentiality

The confidentiality, non-disclosure, and intellectual-property obligations set out in her Internship Offer Letter (Ref: TAS/HR/INT/2026/001) continue to survive the completion of this internship and remain in force.

We thank Shubhangi for her valuable contribution to TruAdaptiv Systems Pvt Ltd and wish her continued success in her academic and professional endeavours.

Warm regards,
For TruAdaptiv Systems Pvt Ltd
